1- Installation

Our IceSlideShow Joomla module will display your big photos from your Joomla articles and will turn them to a nice-looking slideshow. When we build this module we have a precise goal. It should be easy to be configured and it should be fast-loading.

The module has some unique feature:

- Responsive module to display in all kind of devices.
- Resizes images automatically.
- Sort out the articles you'll display with a single click.
- Very easily to be configured.

System Requirements

* IceSlideShow for Joomla3 requires that you have already installed Joomla3.0 version and have administrator access to it.
* We assume that you have met the all other requirements like the PHP version or the DataBase version for Joomla3

Below are all the steps showing how to install the module through your Joomla administrator.

Step1:After you have downloaded the IceSlideShow_V3.0.1_Unzip_First.zip file firstly you have to unzip it.

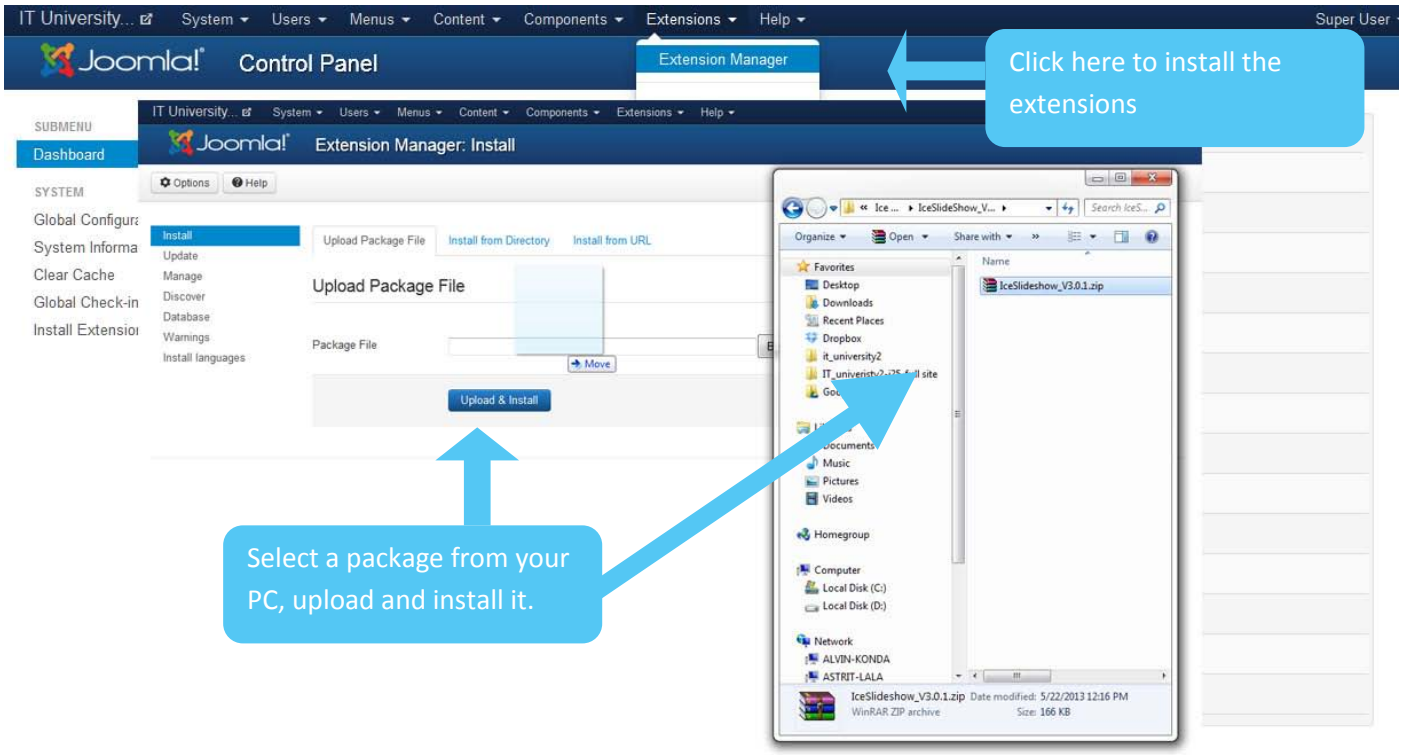
There are two files:

- IceSlideShow_help.pdf
- mod_iceslideshow_v3.0.1.zip

Step2: Enter to your Joomla administration with your username and password

http://www.your-site-name.com/administrator

Step3: Go to "Extensions Manager" page and under the "Upload Package File" select the IceSlideShow file(mod_iceslideshow_v3.0.1.zip) from your PC, upload and install it.

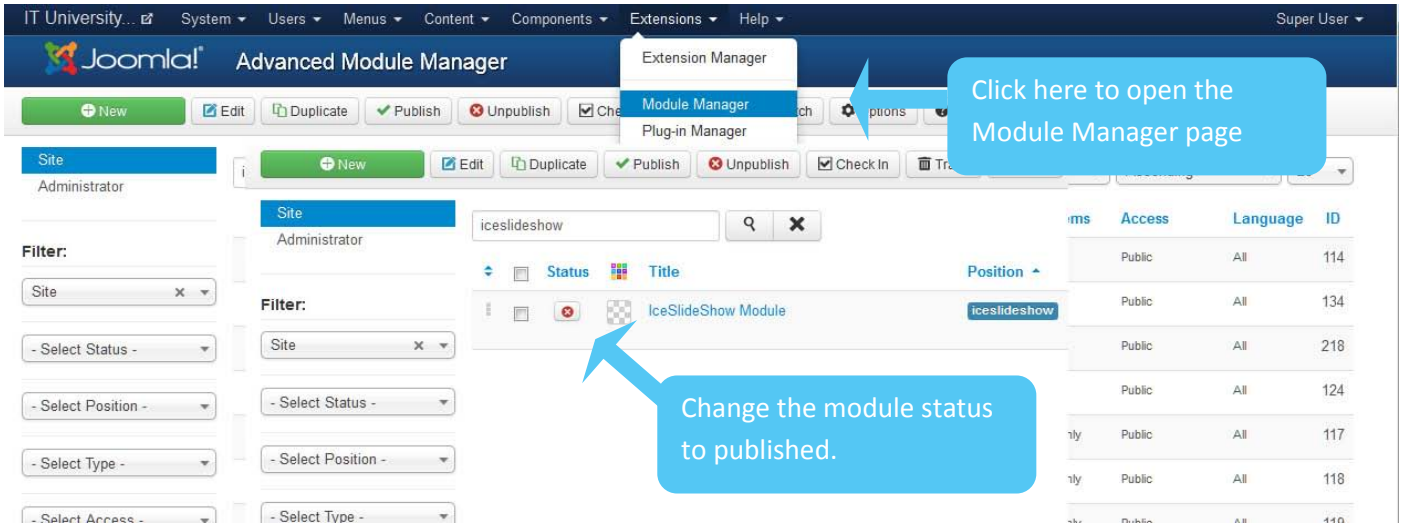


Once it will be installed you will see a message saying:
Installing module was successful.

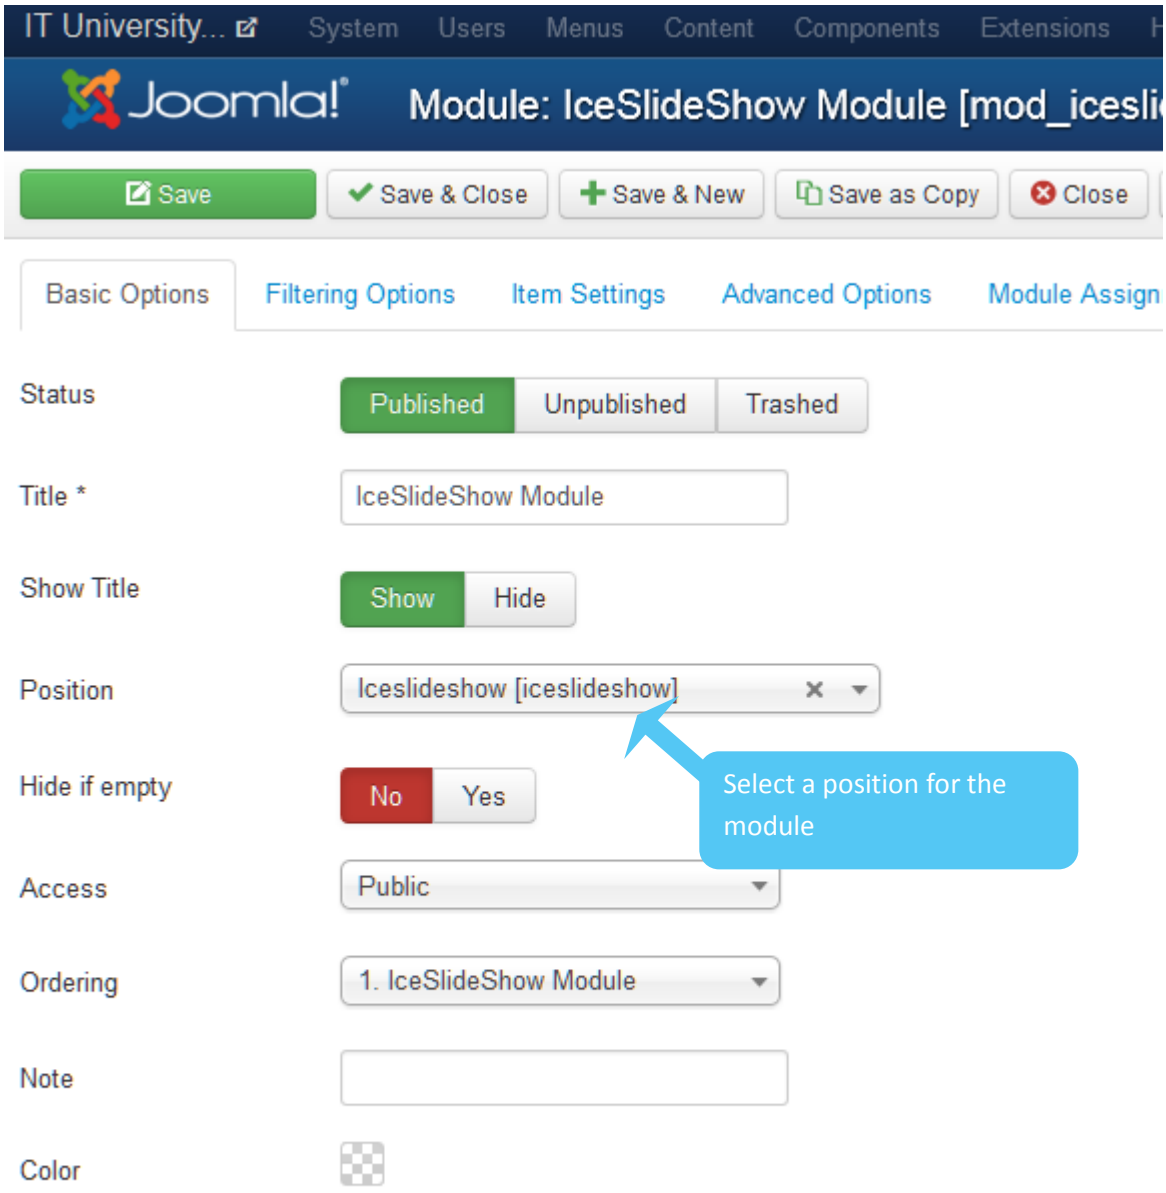
* If you receive an error in a red box saying "Warning: Failed to move file!" probably you have not enabled the "FTP Settings" which is on the following:
  Joomla Administrator -> Site (main menu) -> Global Configuration -> Server (3rd tab)
* If case you still cannot install the items please Ask for Help.

Enable the Module

Go to Module Manager and filter the module by typing “iceslideshow” on the filter field.
You have to enable the module by clicking on the red cross sign as showing in the following screenshot:



The next step-**Select a position for this module**



- Basically each parameter is explained on the module page. If you put the mouse over the parameter title you should see a small black pop up box to appear. So, there is no need to explain each of these parameters here on this guide.

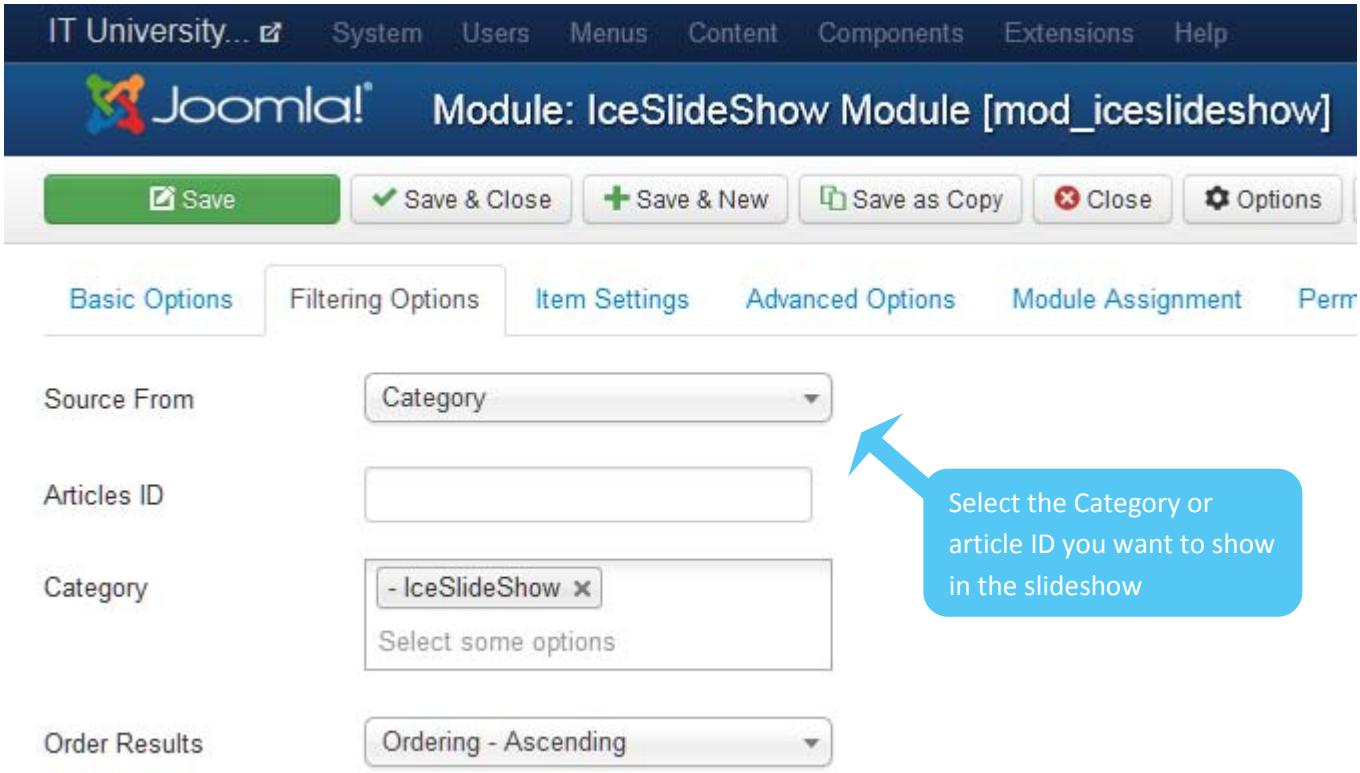
- However you should keep in mind some things. The first one is to choose the pages/the menus where IceSlideShow will appear. Do this in the last tab, Menu Assignment. There isn't any definite selection of menus – all depends on your choice.

- Also you may select the color scheme for IceSlideShow the default (white) or dark.

Afterwards the next important step is to select what you want to the module to display.

This is handled by the last parameters in the Basic Options tab, Data

The next step is to select the category from where the articles will be taken. The way you should work with it is pretty simple: Group the articles (text or images) in a new category (e.g in the category “IceSlideShowl” and then choose this category in Filtering Options, Source From..



The other things to set about the module are” the maximal number of items to show (Limits items), the effect (interval or vertical), the autoplay option etc.
