

# Beautiful Joomla Templates To Finish In Record Time

www.icetheme.com

**This Installation Guide is applicable for both Joomla 3.x and Joomla 2.5.x**

The tutorial below supposes that you have already followed the [instructions for the installation](#) and that you have installed the ExpAutosPro component and its accompanied extensions.

- In case you receive the following alert message when trying to save the configuration page

## Warning

Field required: Groups for stats

Go to Admin Area -> Components -> EXP Autos Pro -> Configuration -> Stats tab  
and select **Groups for stats** to "Public"

- Another editing that needs to be done is the following:

Go to Admin Area -> Components -> EXP Autos Pro -> Configuration -> Details tab.

On the "Skins" field click on the "Change params" button.

After the pop up window appears, find this line:

```
$expuse_prettyphoto = 0;
```

And change it to:

```
$expuse_prettyphoto = 1;
```

## Step 1:

- Go to ExpAutos Pro [downloads page](#). ( for Joomla 2.5.x [click here](#))

Find the **Skins** part and download the package. Unzip the zip file on your computer. Copy the content inside of the "No Zip" folder into your website on the following directory.

*components/com\_expautospro/skins*

Go to Admin Area -> Components -> EXP Autos Pro -> Configuration

And for the following tabs:

- Categories
- Makes
- Models
- List
- Detail
- Compare
- Import
- Dealer List
- Dealer Detail
- Pay Level
- Payment
- User Add
- Add
- Add Images
- Search
- Stats

Select for the **Skin** field “default\_bootstrap” and for the **Mobile Skin** “default\_mobile\_bootstrap”.

### IMPORTANT

Selecting the mobile skin to “default\_mobile\_bootstrap” will make a completely mobile version for the ExpAutosPro menu item. In case you don't want this, simply select for the mobile skin “default\_bootstrap”. We have made the ExpAutosPro fully responsive and it will work very good without the mobile skin.

## Step 2:

- Go to Admin Area -> Extensions -> Module Manager

Click the “Search tools” button to show the filters. Under the “Select Position” dropdown select “::None::” to show all the modules that are positioned under this position.

On the top right of the browser window its the “limit box”. Select from “20”, which is the default state to “All” to show all modules.

After you have shown all modules for this position, check all modules from the “check all” checkbox located on the top left part and hit the “Trash” button to delete all this modules.

All ExpAutos Pro modules that are shown on our [Demo](#) are already published and will show on your website. Of course, you may publish or unpublish any other ExpAutosPro module that your project requires.

Thank You for reading this short tutorial. We hope it has helped you.

For anything else you are welcome to get support from our [Forums](#) or if your query its totally related to ExpAutos part you may visit [ExpAutos Forums](#).
