

# Manual Installation

## Joomla 3.0 Installation Guide

Notice: Inside the template package, you'll find ready the Exp Autos Pro Installation Guide.

## Introduction

IceTheme recommends using the Clone Installer as it will reproduce a copy of the demo that you have seen in minutes and without difficulties. In other words the Cloner is a Quick Install package of Joomla combined with all the content and modules exactly like our Demo. Joomla CMS and all the extensions used will be positioned and configured ready to work. However if you have an existing site the other option is the manual installation.

If you have already a running Joomla! site and you are not starting from scratch (which is this case) then you need to **manually install the template** and its complimentary extensions, then you have to edit their parameters through their respective pages. Please, follow the below steps to make the manual installation to learn how to do so.

**There are 3 steps which you can easily complete:**

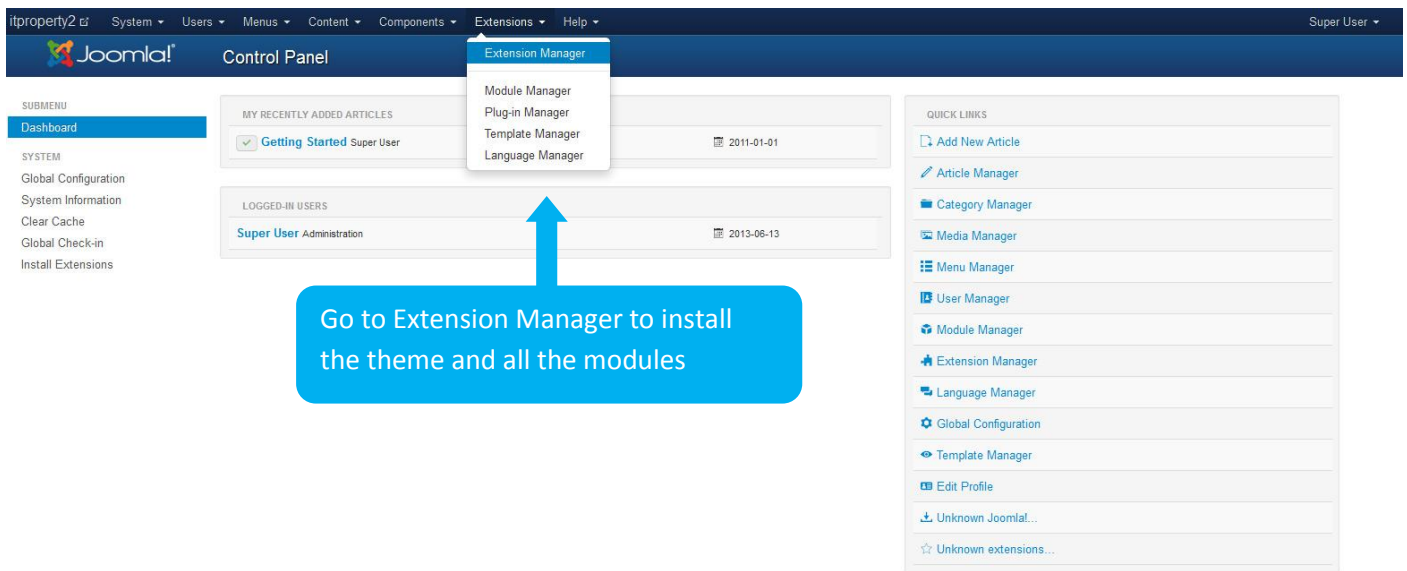

- 1- Install and configure the IceTheme theme
- 2- Install and configure the modules
- 3- Install and configure the Exp Autos Pro component

# 1- Install and configure the IceTheme theme

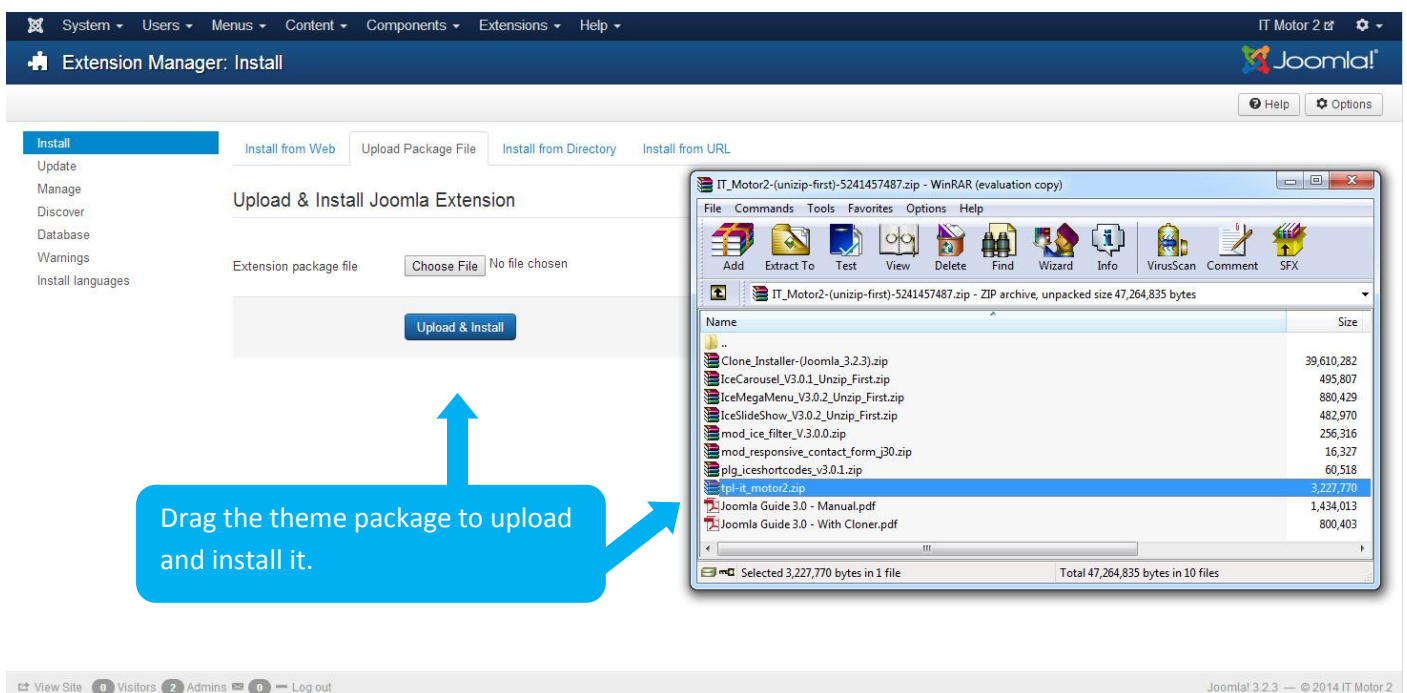

Extract the content of the IceTheme theme (All In One Package) you have downloaded on your computer.

Login to your Joomla Administrator with the username and password that you have provided during the Installation Process. The Joomla! Administrator panel can be accessed by adding "/administrator" at the end of your URL like this <http://www.your-site-url.com/administrator>

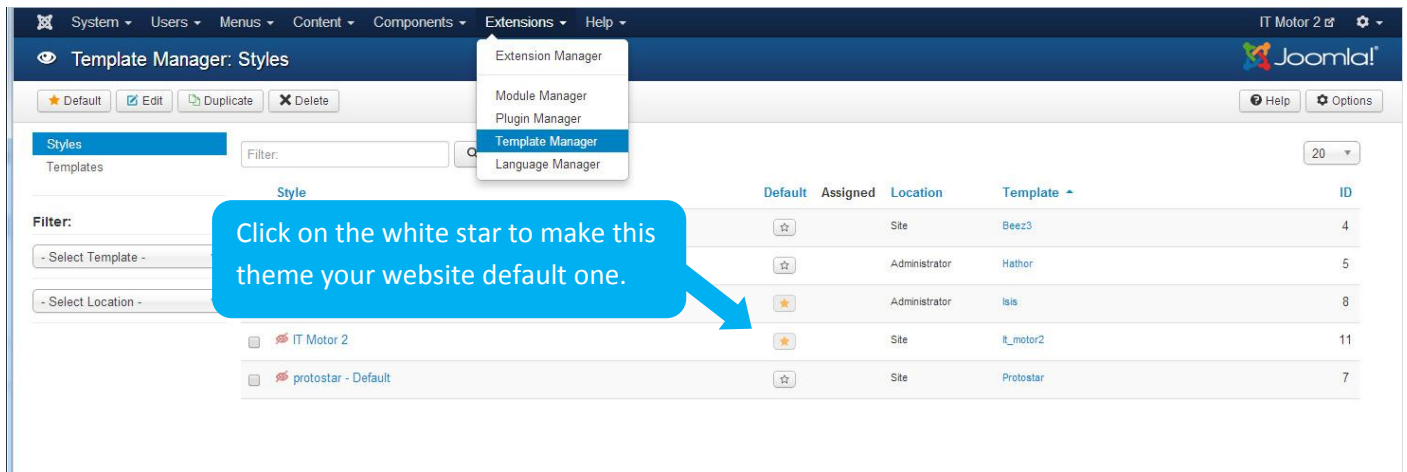

**Go to Extensions -> Extension Manager** to install your IceTheme theme and its complimentary extensions.

Drag the theme package to upload and install it.

After you have installed the theme package, go to **Extensions -> Template Manager** to select your default Joomla Theme for your website which in this case is the theme you just installed.

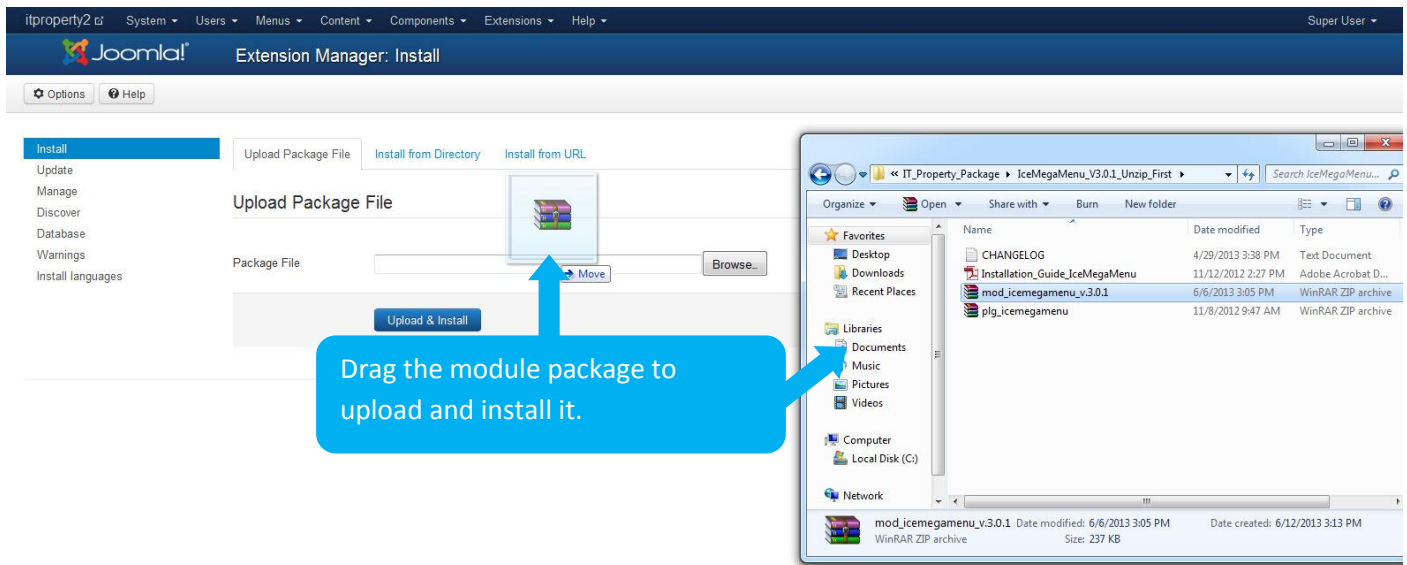

## 2- Install and configure the modules

Inside the All in One package besides the theme you'll find also all the modules which are:

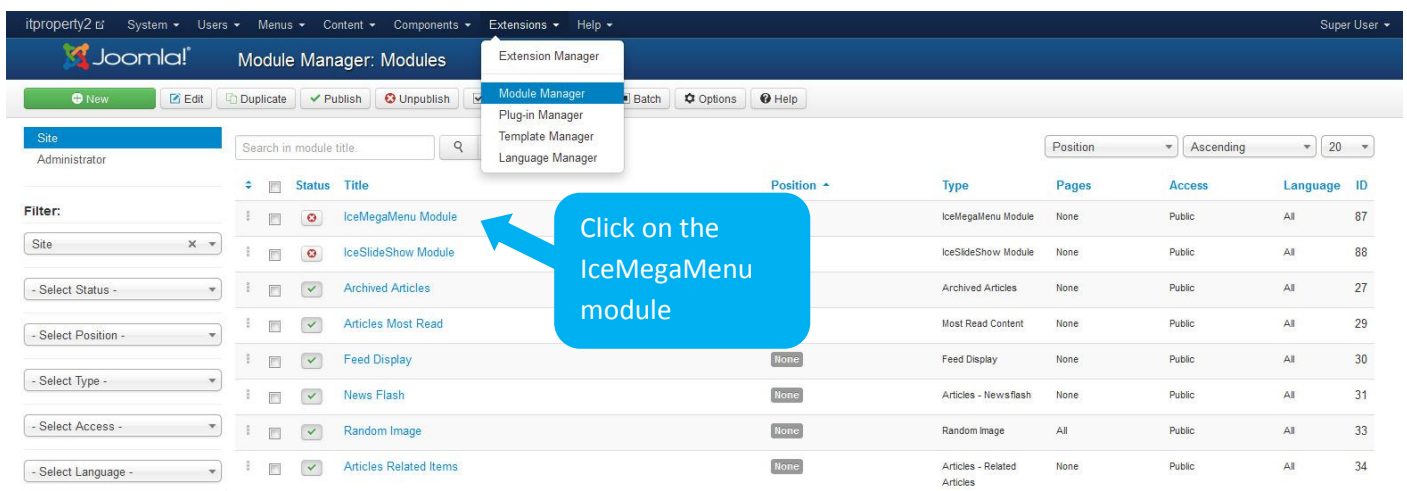

- A. mod\_icemegamenu\_v.3.0.1.zip
- B. mod\_iceslideshow\_v3.0.0.1.zip
- C. plg\_iceshortcodes\_v1.0.zip
- D. mod\_ice\_filter\_V.3.0.0

## A. IceMegaMenu Module Installation

We will start with the IceMegaMenu module installation and you can do the same with the other ones. **Go to Extensions -> Extension Manager** to install the module.

After you have successfully installed the module you must do the same with the IceMegaMenu plugin. Now you must go to **Extensions -> Module Manager** to configure the module.

Congratulations... By now you have successfully done your job. After you have published all the available modules from the above point you should edit their respective parameters to match those from the theme demo, but you may also play with them to suit to your projects needs. We have installed and configured successfully all IceTheme extensions.

After that, you may click on the "Site" button on the top left of the screen to check if everything is working fine on your website. You should be able to see the changes you have made on your website.

Thank you For Using Our Joomla Theme!

Your IceTheme Team
