

PhotoShop Source Files Guide

PhotoShopSource Files - IT Motor 2

Inside the PhotoShop Source Files package you will find the main frame that we have used to design the template. Also, we have provided for each style the corresponding PSD file, so that you may directly work with the exact one that you are using as the default.

Normally, the majority of the styling on our template is done with CSS only, which has more flexibility and better speed. (Images for decoration require more time to load). But there are some parts that cannot be done with CSS only, for example the main background. You may use the PSD file to alter and save that particular image.

As a Developer plan member, you'll receive full support from our talented support team. Any changes that you would like to do on your website in terms of the design, you are more than welcome to ask for help through our [Support Forums](#). We are open from Monday to Friday 09.00 – 17.00 GTM+2

Logo

Inside the ZIP package there is a file called "logo.psd" which contains the PSD file so that you may easily change your logo according to your website name. Again, if you can't work with the PSD file and want to have a logo for your website, you may ask our Support Team to make it for you. Please go to our [Support Forums](#) to injury.

The logo uses the "Droid Serif" font. [Download Font](#)
