

Quick Installation – SQL Demo Content

1. Install Joomla! on your server
2. Install the Template via Joomla installer
3. Install (if available) our Module Extensions (Slideshow or Lof Article Slider)
4. Copy our “image” folder with your FTP programm from demo content directory to your Joomla “ROOT” folder
5. Connect to your Hosting Provider
6. Open the PHPmyAdmin console and switch to your database where Joomla is installed
7. Import the “sql-dump.sql” from demo content folder into your database
8. Now go back to your Joomla Admin and login

Important

- **Goto > Global Site Configuration > Server**
- **Insert > Database Tables Prefix “jp_”**

The screenshot shows the Joomla! Global Configuration interface, specifically the 'Server' tab. The 'Database Settings' section on the right contains the 'Database Tables Prefix' field, which is highlighted by a red box containing the text 'jp_'. A red arrow points from this box to the 'Database Tables Prefix' input field. Other settings visible include 'Database Type' set to 'Mysql', 'Host' set to 'localhost', and 'Mailer' set to 'PHP Mail'.

ATTENTION:

After you have set the database table Prefix your actual **user & password** has been changed to:

User = admin

Pass = password

Please change that after first login

Now login into your Joomla admin with the new password and goto:

>> Extensions > Extension Manager > Database and click “FIX” on the right top button
