

# Joomla Template: JP- Investment

Provider:	www.joomlplates.com
Template Date:	04/2012
Source File(s) Format:	Photoshop CS+
HTML/CSS type:	HTML5/ CSS 2.1&CSS3
Joomla Compatibility:	1.5.x / 2.5.x

## Setup&Readme

Welcome to this small readme file and thanks for using one of [Joomlplates.com](http://www.joomlplates.com) Joomla Templates. The following documentation will help you to install, setup and maintain the template and its file(s). If you have further questions, problems or if you need support feel free to contact us. Just fill out the contact form at our website [here](#).

**You can always request some support from us, but you need to take in mind that customization is not regular support service.**

**TIP:** If you want to customize a template ( logo.gif, color, font or background) and don't know the css class, please use Firefox with the Firebug extension. Here you can analyze every CSS style for customizing the template CSS.

**Tutorial:** <http://getfirebug.com/html>

## Template Installation&Activation

Read and follow the three steps below to install and activate your new template. After the successfull installation and activation read on and learn more about the setup and the different options provided by the template.

### 1.) Download&Extracting

First of all you have to download the template package to your local HDD. Than extract the .zip archive. The archive includes the templates installation file (another .zip archive) plus additional files like this documentation, Photoshop source files etc. Keep in mind where you store the installation file and proceed to step 2.

### 2.) Installation

Log into your Joomla's admin backend (enter <http://www.yourwebsiteurl.com/administrator> in your browser) and click on **"Extensions -> Install/Uninstall"** to access the extension manager. Hit the "Search" button, select the installation file from your HDD and hit the "Upload File & Install" button. Wait a moment and you are done. Proceed to step 3 to learn more about the activation and setup.

### 3.) Activation

Your new template is installed now but inactive. To activate it click on **"Extensions -> Template Manager"**. A list of all installed templates appears. Select your new template and hit the "default" button in the upper right corner. Your template is now installed and active and you can start to set it up by following the next steps in this document

**Download:** Much more detailed [PDF Template Installation](#) instruction.

We always recommend installing our demo content first to trial and understand the template more efficiently.  
Therefore read the PDF instructions at >> **Unzipped Template / Joomla 1.x / demo content / Pdf files**

## Template Configuration

### 1.) Setup your own logo ( image)

- Connect via FTP to your installed Joomla Root
- Goto the folder templates > and select your installed Joomlapiates template
- Search into the image folder > jp\_your\_template / images / logo.png or logo.gif
- Delete now the image and upload your own logo image file.

## Suckerfish Menu Configuration

The template comes with an moduleposition called "**suckerfish**".

1. To display your main menu module on this position log into your backend and click on "extensions->module manager".
2. Select your main menu module from the list and hit the "edit" button in the upper right corner. The main menu module setup screens appears.
3. Select as moduleposition "suckerfish" and save the changes.
4. To activat the "Suckerfish" drop down function for sub menu items click on "Module Parameters" in the right column and activate the "**Always show sub-menu Items**" function.
5. Than click on "advanced Parameters" and use the module parameter show on the image below.
6. Save the changes.

Make sure that the module is published on all home- and subpages and that no other module is published on the "suckerfish" module position.

#### Details

Module Type:	<b>mod_mainmenu</b>
Title:	Main Menu
Show Title:	<input checked="" type="radio"/> No <input type="radio"/> Yes
Enabled:	<input type="radio"/> No <input checked="" type="radio"/> Yes

Order:	0::Main Menu
Access Level:	Public
ID:	1
Description:	Displays a Menu.

#### Menu Assignment

Menus:	<input checked="" type="radio"/> All <input type="radio"/> None <input type="radio"/> Select Menu item(s) from the List
Menu Selection:	<div><div>ExamplePages</div><div>Section Blog</div><div>Section Table</div><div>Category Blog</div><div>Category Table</div><div>keyconcepts</div><div>Extensions</div><div>Content Layouts</div><div>Example Pages</div><div>mainmenu</div><div>Home</div><div>Template Layouts</div></div>

#### Parameters

▼ Module Parameters	
Menu Name	mainmenu
Menu Style	List
Start Level	0
End Level	0
Always show sub-menu Items	<input type="radio"/> No <input checked="" type="radio"/> Yes
Target Position	
▼ Advanced Parameters	
Show Whitespace	No
Caching	Use Global
Menu Tag ID	
Menu Class Suffix	
Module Class Suffix	
Maximum Menu Depth	10
► Other Parameters	

MooMenu ( Suckerfish) is native integrated and needs NO extra module installation.

## Joomla 1.5 only! ( MooTools Upgrade ) Javascript Error

The Moomenu and the integrated module slider or slideshows are not working with enabled **mtupgrade** plugin.

1. To disable the mtupgrade goto > extension > plugins
2. Search for System plugins
3. Disable the "System - Mootools Upgrade"

## Plugin Manager

Filter:

#	<input type="checkbox"/>	Plugin Name	Enabled
1	<input type="checkbox"/>	<a href="#">System - Mootools Upgrade</a>	
2	<input type="checkbox"/>	System - SEF	
3	<input type="checkbox"/>	System - Debug	

**Edit Plugin**  
System - Mootools Upgrade

if you want to use the mtupgrade plugin, you have to disable the Moomenu from Template backend parameters.

## Additional Extensions ( Slideshow, Article Slider ect.)

- Please read the PDF instructions files at > jp\_your template / Joomla version / extensions / pdf files
- Please use for the article slider and the Slideshow the module position // SLIDESHOW //

## Modulepositions & Setup

### 1.) Number of positions

The Template provides a lot of modulepositions, separated into different sections. **Click on the image to the right** to open a modulepositions overview map. All modulepositions are collapsible, they are removed completely if they are not in use.

### 4.) Setup individual HTML modules

A small video tutorial of setting up a custom Module in joomla 1.6 setup custom modules. Joomla allows you to add your own modules with your own text/HTML content very easily. We use such custom modules on the templates demo site to outline the different module positions. If you want to add your own log into your admin backend and click on **"extensions->module manager"**. Hit the "new" icon in the upper right corner and select as module type "custom HTML".

The setup screen of your new module appears. Add a name, select the module position where you want to display your content (take a look at the "module map" above) and add your content into the editor text box at the bottom of the setup screen. You can add texts, images, links and any other HTML elements. Save your module and publish it.

### 6.) Module Positions

## Module Postions

- 1.) LOGO / logo.png
- 2.) Topmenu
- 3.) Banner
- 4.) Suckerfish
- 5.) Breadcrumbs
- 6.) Slideshow
- 7.) User 1
- 8.) User 2
- 9.) User 3
- 10.) Before
- 11.) Left
- 12.) Right
- 13.) Joomla Content
- 14.) After
- 15.) User 4
- 16.) User 5
- 17.) User 6
- 18.) User 7
- 19.) User 8
- 20.) User 9
- 21.) Debug
- 22.) Debug

## 7.) Module Class Suffixe

### ▼ Advanced Options

Alternative Layout	Default
Module Class Suffix	hot
Caching	Use Global
Cache Time	900

We added different Module Style which can be enabled via Joomla Backend:

Extensions > Module > Parameter

1. Basic Module Style = no suffix
2. New Module Style = new
3. Hot Module Style = hot
4. Top Module Style = top

## Lightbox Configuration

The template comes with a nice and simple "Lightbox" script. Means you can add images or external sites which opens in a nice box overlay while the background becomes dark.

For example this code:

```
<a href="bigversion.jpg" rel="lightbox" title="A sample title"></a>
```

shows one image (smallversion.jpg) and if the user click on it the link target (bigversion.jpg) will open up in the lightbox.

The important thing is the rel="lightbox" code. If you add it to a link somewhere on your website the link href target will open up in a lightbox.

To add "rel="lightbox" code switch your editor to HTML mode (hit the small "html" icon in the toolbar or click on the "toggle editor" button below the editors text window.
